Sequence 1, Application US/09832441
Patent No. US20020009434A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Danielsen, Steffen
APPLICANT: Schneider, Palle
TITLE OF INVENTION: Polypeptides having haloperoxidase activity
FILE REFERENCE: 10019-200-US
CURRENT APPLICATION WUMBER: US/09/832,441
NUMBER OF SEQ ID NOS: 2
SOFFWARE: Patentin version 3.0

## gb_gss2:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Madical
Science: Lissue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CTICTGCTCTAAAAGCTGCG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             / Lissue type="blood"

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in the Human Genome Center, University of Tokyo Institute of Medical Science; issue and RNA were prepared in the Department of Large Animal Medicine, University of Georgia, sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CTTGGCTGAAAAGCTGGG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   l. .646

TITLE	An EST database from equine (Equus caballus) stimulated peripheral blood leukocytes
JOURNAL	Unpublished Other_ESTS _ LeukoS3_3_G11.b1_A025 Contact: CordonniePratt MM
	Laboratory for Genomics and Bioinformatics The University of Georgia, Department of Plant Biology Plant Sciences Building, Rm. 2502, Athens, GA 30602-7271, USA Tel: 706 542 1860
	Fax: 706 583 0210 Email: mmpratt@uga.edu Libbrary constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in the Human Genome Center Iniversity of Tokyo Institute of Medical
	Science, tissue and RNA were prepared in the Department of Large Animal Medicine, University of Georgia, sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia
	Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
FEATURES	a
	)
	/strain="Tennesee walking horse" /db_xref="taxon:9796"
	/clone="LeukoS3_3_G11_A025" /sex="female"
	/tissue_type="blood" /cell_type="leukocytes"

/clone_lib="Stimulated peripheral blood leukocytes SI"
/clone_Crgan: circulatory system; Vector: pME188-FL3;
Site_l: Xhoi; Site_2: Xhoi; The library was prepared from polyA+ RNA from equine peripheral blood leukocytes
isolated from a healthy adult horse. The leukocytes stimulated for 4 hr with 10 ng/ml E. coli 055:85 LPS.
bouble-stranded cDNA was cloned unidirectionally into different Draili sites of the pME188-FL3 vector (5-prime Draili site is CACTGGTGG, 3-prime Draili site is CACCATGTG
). Xhoi excises the CDNA insert."
Animal Medicine, University of Georgia; sequencing done in the Laboratory for Genomics and Bloinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA. Seq primer: Sugs (CTTCTGCTTAAAAGCTGCG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CD468492 1700 bp mRNA linear EST 04-JUN-2003 LeukoS3 1708.gl A025 Stimulated peripheral blood leukocytes S3 Equus caballus cDNA clone LeukoS3_3_D08_A025 5', mRNA sequence.

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; tissue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia: sequencing done in the
Laboratory for Genomics and Bloinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CTTCTGCTCTAAAAGCTGCG).

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in the Human Genome Center, University of Tokyo Institute of Medical Science; tissue and RNA were prepared in the Department of Large

Animal Medicine, University of Georgia; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence onds have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.

Seq prime: Sugs (CTTGCTCTAAAAGCTGCG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /cell_type="leukocytes"

                                                                                                                                                                                                                                                                                                                                                                                         9
                                                         The present invention describes a Babesia canis associated protein (1), comprising a Bevirls protein of 15 kD molecular weight (MW) and having a sequence of at least 80% homology to a sequence (ABP53714) of 141 amino acids, or a Bevir32 protein of 32 kD WW and having a sequence of at least 80% homology to a sequence (ABP53715) of 285 amino acids, or their immunogenic fragments. (1) have antiparasitic and immunostimulant activities, and can be used in vaccines. (1) can also be used for the preparation of a vaccine for combating B. canis infections. (1) is also useful in a diagnostic test for the detection of antibodies against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Babesia canis, Bcvir15; 15kD protein; Bcvir32; 32kD protein; infection; antiparasitic; immunostimulant; vaccine.

a sequence of at least 80% homology to a sequence (ABP53714) of 141 amino acids, or a Bcvir32 protein of 32 kD MM and having a sequence of at least 80% homology to a sequence (ABB53715) of 285 amino acids, or their immunogenic fragments. (I) however antiparasitic and immunostimulant activities, and can be used in vaccines. (I) can also be used for the preparation of a vaccine for combating B. canis infections. (I) is also useful in a diagnostic test for the detection of antibodies against B. canis associated antigenic material. The present sequence represents Bcvir32 from the present invention.
